

Louis Anthony Jewelers

Project: Expansion & Renovation of Existing Jewelry Store

Architect: JSA Architect

Owner: Louis Guarino

Location: Norman Centre, Bethel Park, PA

Shannon Construction renovated and expanded Louis Anthony Jewelers located in the South Hills of Pittsburgh, PA.

While construction was taking place on the expansion side, the existing jewelry store remained in full operation. This project demanded elevated finish carpentry which included coffer ceilings, crown moldings, stately columns, gift display areas, and custom-built display cases. The lighting requirements were specialized to illuminate the precious metals and jewels being sold.

The project required close coordination with audio visual and security vendors to blend these elements into a state of the art fine gift purchasing experience.

Lounges and wet bars were incorporated in discreet locations to allow the client to provide personal enhancements to the sales experience.
