

Sewickley Valley Medical Group – Cardiology

Project: Cardiology Office

Architect:

Owner:

Vacant retail space was renovated into a state-of-the-art Medical Cardiology office. The new space consisted of patient rooms with high grade medical cabinetry, doctor's offices, and reception area.

The scope of work required a nuclear camera room with strict design regulations. As a result, the floor had to be reinforced with steel beams, concrete and a special epoxy floor. Due to the sensitive equipment, a temperature environmentally controlled system was integrated.

Exterior work consisted of new concrete sidewalk with an ADA ramp; reconfigure parking stalls on the side of the building, and new landscaping.
